FISH AND WILDLIFE SERVICE, Albert M. Day, Director

BIOLOGY OF THE ATLANTIC MACKEREL (SCOMBER SCOMBRUS) OF NORTH AMERICA

PART II—MIGRATIONS AND HABITS

By Oscar Elton Sette

Fishery Bulletin 49 From Fishery Bulletin of the Fish and Wildlife Service

VOLUME 51

CONTENTS

	rnopsis of results
D	istribution
	Range
	Seasonal changes in distribution
W	inter habitat
	Location
_	Probable conditions of existence in the wintertime
S	chooling habits
	Mechanism of schooling
	Advantages of the schooling habit
	Schooling according to size
	ertical distribution
	ood
M	ligration of adult mackerel
	Summary description of migration
	Distinction between northern and southern contingents
	Nature of the two contingents
	Spring migration of the southern contingent
	First appearance
	Vernal advance
	Spring migration of the northern contingent
	First appearance
	Vernal advance
	Temperature conditions during the spring migration.
	Relation of feeding conditions to spring advance
	Relation of spawning to spring migration
	Summer sojourn
	Influence of feeding conditions on movements of the mackerel in summertime
	Fall departure
	Evidence on migrations—from tagging experiments
	Distinction between southern and northern contingents
	Migration of the southern contingent
	Migration of the northern contingent
	Summary of tagging evidence
M	ligration of young mackerel
	Juvenile mackerel
	Yearling mackerel
M	orphometric evidence
	ppendix A.—Length-frequency records
	Commercial catch
	Sampling the catch
	Measuring the fish
	Summarizing the data
	Data included
A	ppendix B.—Marking experiments
	Field experiments
	Experiment No. 1
	Experiment No. 2
	Experiment No. 3
	Experiment No. 4
	Experiment No. 5
	Experiment No. 6
	Experiment No. 7
	Influence of tagging on the mortality of mackerel
	Tests of the suitability of various tags for marking mackerel.
	LEND OF THE SHIMDHIV OF VALIOUS LARN OF INTACKFILL HISCKEICH.
